LEARNING EXPERIENCE · INSTRUCTIONAL DESIGN · EDTECH

I help people *learn* the hard things, faster.

I'm Samuel — an engineer turned learning & experience designer. I build training, tools, and interactive experiences that people actually finish and remember, drawing on a mix of teaching, design, and research that rarely shows up in one person.

WHAT I DO

Three things I bring to every learning problem

Good instructional design isn't one skill. It's knowing how people learn, knowing how to hold their attention, and being willing to understand a hard topic deeply before trying to teach it.

01

Teaching instinct

As a teaching assistant at Texas A&M (2021–2025), I taught 2,000+ first-year engineering students — 400+ every semester. I learned where explanations break and how to sequence material so a beginner climbs from lost to capable.

02

Designer's craft

From building apps, games, and VR, I treat a lesson like a level: clear goals, a fair difficulty curve, fast feedback, and no wasted friction. I work in Captivate, Figma, and Adobe CC.

03

Researcher's patience

With a background spanning engineering and visualization research, I'll sit with a subject-matter expert and dig until the system makes sense, then write objectives backward from there.

SELECTED WORK

A few things I've designed and built

From a full educational game to instructional tools and immersive training. [See all work →](#)

EDUCATIONAL GAME

MathFlux — learning through play

A real-time competitive math game that teaches arithmetic by playing it. I designed the full learning loop: onboarding, difficulty curve, and feedback timed so mistakes teach.

Learning loop

Onboarding

Feedback design

IMMERSIVE LEARNING · VR

VR surgical training

A virtual-reality simulation that lets learners rehearse a veterinary procedure in a safe, repeatable space — immersive instructional design where mistakes cost nothing.

VR / XR

Simulation

Procedural training

Teacher App

UX FOR EDUCATORS · 2025

Teacher App

An app built around how teachers actually plan and run instruction — reducing prep friction and keeping the focus on the learning goal rather than the tooling.

Needs analysis

Curriculum

CURRICULUM & INSTRUCTION

First-Year Engineering Honors

As a TA at Texas A&M, I built learning objectives, sequenced material, and rewrote explanations for 2,000+ students (2021–2025) based on where they actually got stuck.
